Oak Class: Science

In our Science lesson next week we will be continuing our work looking at breathing and circulation in animals – which naturally includes us, humans.

The children will be learning about how the heart works to pump blood around our bodies. To bring the subject “to life” for them, I intend to have a pig’s heart in the classroom (obtained from Brian Frisby) as a pig’s heart is similar in size and weight to that of a human.

The children can look at and, if they wish, touch the heart (wearing protective gloves) and the activity has been thoroughly risk assessed.

If your child is likely to upset by this classroom activity, please let me know. I will arrange for a computer or worksheet based activity to be available for them while the others look at the real heart.

Thank you for your continuing support.

Mr A. Warner
Oak Class
